Atlanta GA

Technology leader with deep experience across Solutions Engineering, Product Management, and DevOps — most recently owning how an enterprise AI platform is built, deployed, and secured at scale. Proven track record of bridging technical complexity and business value across sales, engineering, and customer success. Hands-on with cloud infrastructure, security compliance (SOC 2, HIPAA), and AI-native product development. Known for explaining complex topics clearly, earning trust as a technical advisor, and thriving in high-growth, fast-moving environments.

WORK EXPERIENCE

- **Product Manager, DevOps & SecOps**

  Airia | December 2024 - Present

  At Airia, an enterprise AI platform startup, I own how the product is built, deployed, and secured — across both Airia's SaaS environments and customer self-hosted deployments. I work cross-functionally with engineering, product, sales, and customers to solve complex deployment challenges and bring enterprise-grade compliance to our AI platform.

- Lead DevOps and SecOps as Product Manager, owning the roadmap and execution for infrastructure, deployment pipelines, and security operations
- Manage and support deployments across Airia's multi-tenant SaaS environment and customer self-hosted infrastructure
- Lead compliance efforts for SOC 2, HIPAA, and US Data Privacy certifications, coordinating across engineering, legal, and leadership
- Manage external penetration testing engagements and remediation workflows
- Partner with customers, sales, and engineering to solve deployment challenges and accelerate time-to-value
- Support pre-sales by communicating product architecture, deployment options, and security posture to technical and executive stakeholders

- **Strategic Solutions Engineer**

  Cloudflare | January 2022 - December 2024

  As a member of the Solutions Engineering team I served as a trusted advisor to customers, helping them find the best solution for their business needs with Cloudflare. I was a trusted source for developing new firewall rules from log files, crafting performance caching and delivery strategies, and creating or repurposing internal tools and scripts for customers.

  - Extensive knowledge of Cloudflare's products and services, and the ability to articulate their value proposition to potential customers
  - Skilled in conducting product demos, delivering technical presentations, and providing training to customers and partners
  - Demonstrated ability to understand and explain complex technical concepts to non-technical stakeholders
  - Proven track record of successfully completing and closing the Technical portion of new business opportunities
  - Ran technical POC sessions for Cloudflare Application Security, Performance, Network Services and Zero Trust
  - Experience in creating and delivering technical proposals and RFP responses
  - Strong communication and interpersonal skills, with the ability to build relationships with customers and partners

- Instructor for an internal Code Club workshop series

Sales Engineer

Nexthink | 2021 - 2022

Nexthink is the leader in digital employee experience, combining real-time endpoint analytics, automation, and employee feedback to help IT teams proactively resolve issues and improve workplace technology. As a Sales Engineer I owned the technical sales process across enterprise accounts in the Southeast.

- Qualified leads for the sales team by leveraging deep product knowledge to address business problems and articulate value
- Demonstrated how Nexthink solutions supported overall customer initiatives and drove measurable business outcomes
- Engaged with stakeholders across End User Computing, Workplace Management, IT Operations, and IT Leadership to illustrate use cases and build champions
- Supported and led large-scale enterprise transactions by applying industry knowledge to advance and close deals
- Ran and facilitated value-based workshops with prospects to help them understand how Nexthink could address their strategic projects and key challenges
- Conducted Proof of Value engagements

Principal Sales Engineer

Twilio | 2021 - 2021

Twilio is enabling our customers to build the future of communications. As a member of the Solutions Engineering team I am part of the sales team that is facilitating this modernization of communications.

- Demonstrated the best way to use Twilio products to achieve their business goals
- Built a deep understanding of a customer's communications needs and guide them to a technical solution
- Built custom functionality demos using REST API's and low code tools to resolve customer functionality requests
- Developed an application using the Twilio APIs and Node JS

- Demonstrated my application as part of an App bootcamp to earn my Twilio Red Jacket
- Wrote a blog post on building an app using Twilio API's, getting over 25,000 impressions on LinkedIn generating almost 800 unique blog page views

Global Staff Solution Architect

VMware | 2018 - 2021

As a member of the VMware EUC SE Global Pre-Sales team, I evangelized VMware business value and technical benefits to senior level business and technology decision makers at VMware's largest and most strategic customers as well as being instrumental in solution development around Digital Workspace initiatives.

- Helped evangelize VMware's digital workspace journey story, meeting regularly with leaders across VMware's Global accounts in major verticals (including Telecommunications, Oil and Gas, Manufacturing and Retail) through Executive Briefing Sessions
- Mentored new team members and coached them to be successful in the Global SE role
- Participated in and recorded a Success Story podcast about earning customer trust and becoming a trusted advisor, sharing best practices with colleagues
- Part of the sales team that won one of the largest to date End User Computing deals
- Directly responsible for the technical evaluation of the suite of VMware technology and End User Computing products, inclusive of macOS, iOS, Android and Windows 10 management, Identity and Access control, and Virtual Apps and Desktops with the Workspace ONE suite
- Responsible for developing and presenting product demos that included our extended Dell Technology family of products, for use at Executive Briefing sessions to demonstrate the value of our portfolio of technology
- Overcame technical challenges and business objections by leveraging personal knowledge and experience and engaging with peers inside of VMware to deliver compelling points of view in original ways
- Responsible for translating technical wins into business outcomes to drive return on investment value from the

technical solution
- Worked with Product Management and Development teams to evaluate customer feedback on product features and market direction to ensure we were able to meet complex requirements
- Developed product integration strategies and wrote personal public blog posts based on customer questions to address advanced questions

IoT Alliance Architect

VMware | 2017 - 2018

As the IoT Alliance Architect I was a high impact, very visible and inspirational role in driving a “future bet” development of VMware IoT products, influencing new products/solutions, and product improvements that VMware was evaluating bringing to market. I was responsible for engaging with clients at many levels (Solution Architects, VPs, Directors of IT, and Technical Administrators); building relationships, evangelizing VMware solutions, and providing domain expertise to assess go to market viability.

- Selected to contribute to a “future bet” internal startup team building VMware’s IoT platform from the ground up
- Drove product features and roadmap in partnership with Product Management, Engineering, and Marketing
- Developed IoT training curriculum and trained ~30 partner engineers across Europe
- Created a publicly available VMware Hands-on Lab for the Pulse IoT V1 release
- Led C-level customer meetings and represented VMware IoT at Mobile World Congress, Dell World, SAP Sapphire, and VMworld
- Presented a solution overview at VMworld Barcelona 2017
- Built and maintained IoT demo environments and conducted hardware/software POCs for customers and partners

Enterprise Sales Engineer

VMware | 2013 - 2017

As a Sales Engineer in End User Computing, we were revolutionizing the way businesses delivered and controlled devices and applications in the enterprise. I was responsible for

selling the business value and technical benefits of VMware to senior level business and technology decision makers and was instrumental in solution development around Digital Workspace initiatives.

- Performed solution overviews for industry awards, winning the SIIA CODiE award for one of our Mobile Applications
- Selected to present Technical Product sessions at the global AirWatch Connect 2014, 2015 and 2016 events, as well as VMworld 2017
- Mentored new team members
- Drove the Healthcare sales team to be one of the top performing verticals, achieving well over 100% of quota in multiple quarters in 2015
- Sales Engineer on the largest company-wide revenue deal in Q3 2014
- Worked closely with customers to demonstrate the business value of our solutions, not only the technical problem resolution
- Thrived in the dynamic explosive growth environment we were in at the time
- Presented and facilitated our customer outreach events, and user group sessions across the US

- **Professional Services Consultant**

  AirWatch | 2012 - 2013

  I was a member of a high performing global team that had a direct positive impact on customer adoption of AirWatch, during an extremely rapid growth period. As a trusted technical advisor my role was to help our most important customers accelerate time to value by successfully delivering an implemented project on time and budget.

  - Provided “white glove” implementation services for our largest customers across different business verticals
  - Deployed solutions leveraging iOS devices in the cockpit of airplanes
  - Led end-user training through both on-site and remote sessions
  - Established clear and accurate project timelines and schedules, earning customer support
  - Coordinated project status tracking and issue prioritization for implementation tasks

- Supported deployments with integrations into existing enterprise infrastructure, including Active Directory, Certificate Authorities and Email systems

PROJECTS

- **Building an SMS Survey**

  GitHub project and Blog post

  SMS Based Survey with Twilio and Airtable

- **Building a Twilio App**

  GitHub project and Blog post

  My first Twilio app

- **Workspace One Event based workflows**

  Blog post

  Automating Workspace ONE UEM with APIs and Events

SKILLS

AI & Cloud Platforms

Enterprise AI platforms, LLM orchestration, AI governance and security

AWS, Azure, GCP — SaaS and self-hosted deployment models

Kubernetes, Docker, CI/CD pipelines, infrastructure as code

Security & Compliance

SOC 2, HIPAA, US Data Privacy certifications

Penetration testing management and remediation

Zero Trust, network security, firewall policy development

Product & Engineering

Product management — roadmap ownership, cross-functional execution

Technical pre-sales, POC design, RFP responses

REST APIs, scripting, low-code automation tools

Communication & Leadership

Executive presentations and technical storytelling

Mentoring and team development

Customer-facing workshops and training delivery
